

Testing as a Service

If you're a business owner, vendor manager, CIO or program manager, then you must consider independent testing in your next big software project or implementation. Keep testing the project separate from the vendor or systems integrators, and build quality KPIs and metrics into commercial contracts.

- **Protect Your Investment:** Establish More Efficient Processes To Manage Software Changes
- **Keep Vendors Honest:** Manage Application Quality By Third-Party Vendors Or Internal Teams
- **Mitigates The Risk Of Unwanted Brand Damage:** Improve Software Quality Before It Goes Into Production

Revolution IT's proprietary Test Management Office (TMO) solution establishes a central, independent model to ensure consistent quality assurance, testing and governance across all development activities. This allows organisations to accept and deploy quality solutions into production and provides a consistent and repeatable risk based approach to quality and testing.

Changes to projects, either internally or from external vendors, go through the TMO that defines the amount of testing required to adhere to the organisation's quality policy.

The TMO manages, approves and assists vendors with documentation, testing and quality artefacts required during the planning, design and execution phases of projects. It provides a central point of contact and a conduit between the vendor, business and project management office (PMO) for reporting purposes.

Revolution IT can also provide a TMO quality policy that can be referenced by organisations in vendor negotiations, SLAs, milestone payments and in ongoing vendor management.

Levels of Engagement

To drive up software testing capabilities fast and ensure that Revolution IT's TMO solution dovetails with an organisation's individual capabilities, three levels of engagement are offered:

Option 1: Enable

Revolution IT assists organisations to set up testing framework, methodology and tools to establish governance and control for all testing and requirements activities to achieve cross organisational compliance and standardisation.

- Establish Governance
- Establish Testing Framework
- Establish Methodology
- Establish Processes & Templates
- Establish Tools
- Communication Framework
- Testing Progress and Status Visibility
- Reporting

Option 2: Augment

In addition to Option 1, Revolution IT works alongside client resources with an emphasis on continuous process improvements, focusing on delivery and providing competency uplift through coaching and mentoring of client resources.

- Establish Governance
- Establish Testing Framework
- Establish Methodology
- Establish Processes & Templates
- Establish Tools
- Communication Framework
- Testing Progress and Status Visibility
- Reporting
- Coaching and Mentoring
- Competency Uplift
- Continuous Improvement
- Development of Internal Testing Capability
- Perform Testing Activities in Collaboration with Project Team

Option 3: Manage

Revolution IT provides complete independent QA managing services to clients with a flexibility of options, recommended solutions and a scalable resource pool.

- Complete Independent QA by Revolution IT
- Project Team Augmentation
- Cross Organisation Compliance
